• Initialize $\tilde{u}_l \in \mathcal{R}^{d_l}$ for $l = 1, \dots, L$ with a random vector (sampled from isotropic distribution).

• For each update and each layer *l*: 1. Apply power iteration method to a unnormalized weight W^l :

$$ilde{v}_l \leftarrow (W^l)^{\mathrm{T}} ilde{m{u}}_l / \|(W^l)^{\mathrm{T}} ilde{m{u}}_l / \|_2$$

$$ilde{m{u}}_l \leftarrow W^l ilde{m{v}}_l / \|W^l ilde{m{v}}_l\|_2$$

2. Calculate
$$\bar{W}_{\mathrm{SN}}$$
 with the spectral norm:

Algorithm 1 SGD with spectral normalization

$$\bar{W}_{\mathrm{SN}}^{l}(W^{l}) = W^{l}/\sigma(W^{l}), \text{ where } \sigma(W^{l}) = \tilde{\boldsymbol{u}}_{l}^{\mathrm{T}}W^{l}\tilde{\boldsymbol{v}}_{l}$$
 (2)

(20)

(21)

$$\bar{W}_{\mathrm{SN}}^{l}(W^{l}) = W^{l}/\sigma(W^{l}), \text{ where } \sigma(W^{l}) = \tilde{\boldsymbol{u}}_{l}^{\mathrm{T}}W^{l}\tilde{\boldsymbol{v}}_{l}$$
 (22)

$$w_{\rm SN}(w^l) = w^l/o(w^l), \text{ where } o(w^l) = u_l w^l v_l$$
 (2)

3. Undate
$$W^l$$
 with SGD on mini-batch dataset \mathcal{D}_M with a learning rate α :

3. Update
$$W^l$$
 with SGD on mini-batch dataset \mathcal{D}_M with a learning rate α :

 $W^l \leftarrow W^l - \alpha \nabla_{W^l} \ell(\bar{W}^l_{SN}(W^l), \mathcal{D}_M)$ (23)
